Cool shades. Cooler deal.

Sunwear protection for the eyes is vital whatever your sport of choice. Make your selection of stylish sun frames and then allow Vision Care Associates to fit you with precision prescription lenses. You'll look great and see even better.

Lenses

Technologically advanced premium ophthalmic lenses:

- Variety of tints and polarization
Your choice of tints from light to very dark and in a palette of color options. Polarization eliminates glare that can interfere with outdoor activities.
- No-line progressives
All distances corrected in one lens and a variety of lens material. No visible line so they're cosmetically attractive.
- Transitions®
These prescription lenses come in a range of varieties that darken on exposure to block 100% of UVA/UVB rays.
- High-index for thin/light
Advanced engineering of these lenses creates a thinner profile for people with strong prescriptions and are typically much lighter than standard glass or plastic lenses.
- Polycarbonate (unmatched for shatter resistance)
Comprised of a tough, lightweight plastic providing 10 times more resistance to impacts than normal glass or plastic lenses. Bulletproof windows, riot shields, and airplane windows are made of the same material.

Additional services:

- Outside prescriptions filled
- Vision specialists for recreational sports
- Lenses with scratch-resistant, UV, and anti-reflective coatings

Prescriptions

Let Vision Care's skilled staff identify your prescription needs. You receive a detailed, computer-assisted analysis of your eyes' focusing ability, muscle coordination, and internal and external health.
